## POOL HEATER CHECKLIST:

**Rescomm** recommends the following maintenance **every six months** and at the start of every swimming season in order to maintain maximum performance and efficiency.

### Maintenance and Care:

1. **Examine Flueing System** and make sure there are no obstructions in the flow of combustion and ventilation air.
2. **Clean Area In and Around the Heater** making sure it is free from combustible materials, gasoline and other flammable vapors and corrosive liquids.
3. **Visually Inspect the Main Burner** and pilot burner flame to ensure proper flame color.
4. **Test** the operation of the pressure relief valve.
5. **Test** for proper operation of the water pressure switch.
6. **Provide customer with written analysis** of any recommendations that we may have.

**ATTENTION:** Please see your local pool dealer for help with winterizing and spring start-up as well as properly balancing your water chemistry. If not kept properly balanced it could cause permanent damage to your heater, shortening its lifespan.
